

PROFESSIONAL SUMMARY

I architect deployment-ready Machine Learning pipelines and Agentic AI systems to drive high-impact operational efficiencies. With a focus on taking AI into secure, scalable production, I have driven end-to-end model development across enterprise and defense-level environments. Core expertise includes Generative AI (AWS Bedrock, Gemini, LangChain), scalable Data Engineering (Spark, SQL), and Privacy-Preserving Federated Learning.

EDUCATION

Program	Institute	Year	CPI
M.Sc. in Data Science	Manipal Academy of Higher Education	2026–Present	-
B.Tech in Computer Engineering	Marwadi University	2022–2026	8.43/10.0

EXPERIENCE

- Dyne Tech AI Private Limited

Statistical Data Engineer Intern

Oct. 2025 – May 2026

- Architected scalable ML pipelines for deployment-ready systems, optimizing data flow and enhancing production reliability.
 - Drove end-to-end AI model development, executing rigorous data auditing and statistical optimization.
- ServiceNow

Intern

Apr. 2025 – Oct. 2025

- Engineered and managed automated enterprise workflows using Flows and Automated Test Framework (ATF).
 - Integrated Agentic AI capabilities into ITSM processes via advanced prompt engineering and API integrations.
- DRDO, Ministry of Defence

Engineering Intern

May 2025 – Jul. 2025

- Developed a computer vision-based Intruder Detection System using PCA-SVD for feature extraction and KNN for classification.
 - Implemented real-time ML workflows in a high-security R&D environment, optimizing inference time and dimensionality reduction.
- Cisco

Cyber Security Intern

May 2024 – Jul. 2024

- Executed network mapping and analyzed existing college topologies to defend against network vulnerabilities.
 - Designed a hybrid network topology for faculty and students, successfully implementing robust cloud security measures.
- Afame Technologies

Machine Learning Engineer Intern

Apr. 2024 – May 2024

- Optimized model accuracy by 80% and decreased prediction errors by 10% via advanced feature engineering.
 - Developed and deployed 2 ML models, resulting in improved operational efficiency and cost savings.
- Edunet Foundation

AI & Cloud Intern

Jan. 2024 – Feb. 2024

- Developed an IBM Watsonx Assistant chatbot to streamline the college admission process by handling prospective student queries, providing information, and guiding applicants.
 - Applied NLP and chatbot libraries to enhance conversational functionality and completed two IBM certification courses in AI, machine learning, and conversational systems.
- GAOTek Inc.

Web Developer Intern

Apr. 2024 – Sep. 2024

- Deployed websites using WooCommerce and implemented Ajax Search without plugins, executing custom web modifications.

- Proposed a hybrid pipeline utilizing YOLOv8n for rapid object detection, combined with a ResNet18-backed CNN and Local Binary Pattern Histograms (LBPH) for behavior classification.
- Trained and evaluated the architecture on the CrowdHuman and OpenImages V6 datasets, optimizing computational feasibility for real-time CCTV surveillance applications.
- Achieved a classification accuracy of 70%, leveraging LBPH’s illumination-invariant texture extraction to outperform standard CNNs (68%) and mitigate overfitting in challenging lighting scenarios.

FLIP: Hybrid Encryption Framework Python, TensorFlow, Keras
Publication

- Developed a federated learning framework using homomorphic encryption, achieving 99.23% accuracy on MNIST datasets.
- Successfully mitigated adversarial threats, including data poisoning and model inversion attacks.

HARMONY: HR Automation System Agentic AI, Workflow
Automation GitHub

- Engineered an integrated HR platform leveraging intelligent automation to streamline multi-step recruitment workflows and interview scheduling.
- Integrated Tesseract OCR for automated candidate document processing, extracting text from diverse file types into structured CSV formats.
- Implemented a resume screening module to score candidates against job descriptions and autonomously trigger conditional email communications.
- Developed a dynamic rescheduling handler that monitors incoming emails, verifies HR availability, and automatically generates new meeting links.

Data Waves: Data Engineering Capstone AWS, SQL, Python Credly

- Designed highly scalable data pipelines and processed large-scale datasets as the final capstone project for the AWS Academy.

Software Fault Tolerance with ML/DL Python, Pandas, Scikit-learn
GitHub

- Applied deep learning models to predict and mitigate software faults, drastically improving system robustness and overall reliability.

CERTIFICATIONS

- Generative AI & AI Agents Professional – AWS
- Generative AI in Software Development – Amazon
- Google AI Essentials Specialization – Google
- Code in Place 2026 (Python) – Stanford University
- SQL Foundations – Microsoft
- RAG and Agentic AI Professional – IBM
- AI & ML Engineering Professional – Microsoft
- Stanford - Probability for Artificial Intelligence 2026 – Stanford University

TECHNICAL & SOFT SKILLS

AI / ML	Generative AI RAG Agentic Workflows NLP Computer Vision Federated Learning Supervised Learning
LLM / APIs	OpenAI API Anthropic Claude Google Gemini API DeepSeek Perplexity MCP Zapier AI REST APIs
Frameworks	LangChain LangGraph TensorFlow PyTorch Keras Scikit-learn Pandas Spring Boot React.js Django
Languages	Python C++ SQL Java JavaScript C# HTML
Data & Databases	Vector Databases Apache Spark Hadoop SQLite JDBC Hibernate Data Processing
Cloud / Tools	AWS Google Cloud Microsoft Azure Docker Kubernetes ServiceNow Postman Tableau Git Linux
Soft Skills	Team Leadership Creative Problem Solving Public Speaking Constructive Feedback Process Thinking Communication

PROJECTS

- Naval Ship Detection in Enemy Waters Python, YOLOv8, Federated Learning

- Engineered a real-time YOLOv8 object detection system utilizing CSP-Darknet to classify 47 classes of military vessels across 3 countries (India, China, Pakistan).
 - Integrated a communication-efficient federated learning scheme, enabling decentralized model training across fleets without transferring sensitive raw imagery.
 - Achieved 0.863 precision, 0.820 F1-score, and 0.855 mAP@0.5 over 100 epochs, successfully distinguishing authorized ships from threats under complex maritime conditions.
- Intruder Detection System Python, YOLOv8, CNN GitHub
